Open access publishing with Open Research Europe (ORE)

Free, open, and transparent publishing for researchers in the Netherlands

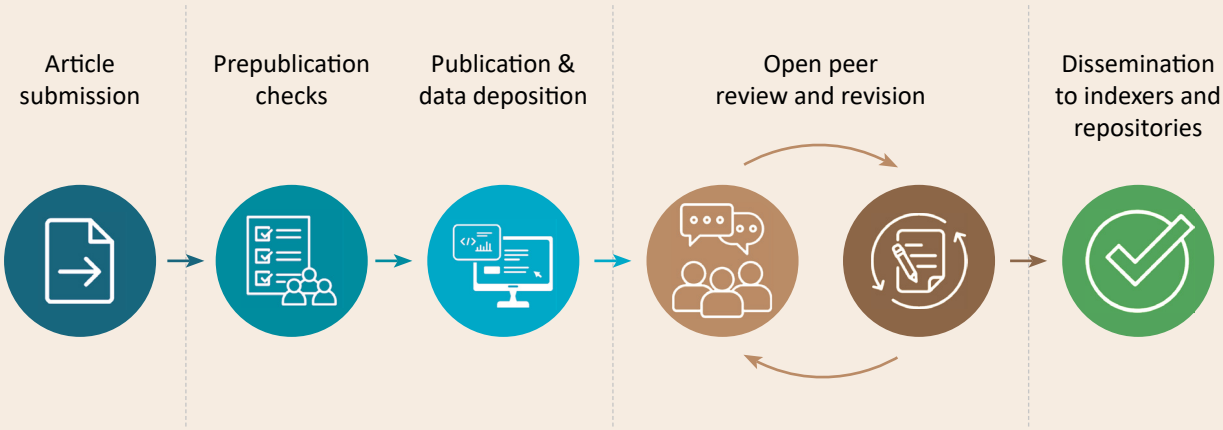

www.nwo.nl/ore

What is ORE?

ORE is a free open access publishing platform that enables researchers affiliated with Dutch research institutions to publish at no cost.

No publishing fees	If you're affiliated with a Dutch research organisation eligible to receive NWO funding, you can publish on ORE for free. No NWO grant is required.
Compliance with NWO open access mandates	With ORE, your publication is immediately compliant with NWO, but also with ZonMw, and Dutch institutional open access policies.
Broader eligibility	ORE is opening its doors to a wider research community, making free open access publishing available to more authors in Europe, including the Netherlands.
Transparent and fast publication and dissemination	ORE offers transparent peer review and versioning of articles. By making reviews openly accessible it promotes transparency, accountability, and continuous academic debate.

And other reasons such as: accessible post-publication peer review, diversity of communities > accessible to all researchers from different disciplines, robust and resilient public infrastructure, academic freedom.

Open research, shared knowledge
